HorseTools multitool HT1-1 is brand new on the market. With the combination of tools in the HT1-1 it's all you need to handle threading and cleaning horseshoes and hooves.

HT1-1 contains: hoof pick, cleaner, thread tap 3/8" inch, square wrenches in four sizes (10, 12, 13 & 14mm) and a knife. The lids of the tool work as a lock holding your selected tool firmly in place, and also serve as a sturdy handle while you work with, for example, the hoof pick.

The multitool is constructed so that when using the thread tap, it can be folded out to make a practical T-shape grip.

HT1-1 comes with a resilient holster that can be attached to a belt. The holster also has a loop to hang it at an accessible place right where you need it, for example the stable. HT1-1 is made of quality stainless steel.

Now available in three different thread tap sizes - 3/8", M10 or 5/16" !
